MONTHLY WEATHER MAP
CANADA

MAY 1958

General Summary of Weather Conditions

MAY 1958

May was rather cool in the Province of Ontario and the southern part of Quebec with temperature deficiencies ranging to five degrees. Mould Bay and Holman Island in the western Arctic also reported temperature deficiencies for the month. May mean temperatures were normal or above throughout the rest of Canada. The greatest anomalies were in the southern interior valleys of British Columbia and the southern part of Alberta where mean monthly temperature ranged to eight degrees above normal.

May precipitation was light in most parts of the Dominion despite excesses throughout most of Nova Scotia, southern New Brunswick and in the Lake St. John area of Quebec. From southern Quebec westward to Vancouver Island, there were deficiencies ranging from fifty to one hundred per cent. In the grain areas of the Prairie Provinces and in southwestern Ontario, light precipitation for May followed similar conditions in the preceding month with serious effects on agriculture in those areas.

On the Island of Newfoundland May was warm, except for a cold spell from the 14th to 16th. Mean temperatures for the month were three to six degrees above normal throughout the island. Gander and Torbay airports each reported new record high mean temperatures for the month, the records extending back 22 and 16 years, respectively. Precipitation for May was generally light along the east coast, deficiencies averaging about ten per cent, while there were excesses in the southwest corner of the island - St. Andrews reporting almost two and a half times the normal fall.

May was comparatively warm along the Labrador coast with all stations reporting excesses of mean temperature. The range was from nine degrees at Cartwright to three degrees at Belle Isle, with the average for Labrador six degrees above normal. Precipitation was below normal along the southern half of the Labrador coast, deficiencies ranging from twenty to seventy per cent. Farther north at Hopedale there was an excess of sixty per cent while inland at Goose Bay there was an excess of eighty per cent.

The first week of May was cool in the Maritime Provinces with the temperatures dropping into the twenties at some stations on the 4th and again on the 7th. Temperatures were more seasonable during the remainder of the month, but it was only on the 27th and the 28th that maximum temperatures reached the seventies. Mean temperatures for the month were normal to two degrees above normal in Nova Scotia and on Prince Edward Island and normal to three degrees below normal throughout the Province of New Brunswick.

The first week of May was fairly dry in the Maritimes. Heavy showers were reported on the 7th and 9th and on the latter date Copper Lake and Dartmouth each reported a twenty-four hour total of just over two inches. From the 18th almost to the end of the month rain was frequent, especially in the Province of Nova Scotia. For the month as a whole, there were excesses ranging to seventy per cent in Nova Scotia and to sixty per cent along the Bay of Fundy coast in New Brunswick. Elsewhere in the Maritime Provinces there were deficiencies which averaged about forty per cent on Prince Edward Island and about twenty per cent in New Brunswick, except for the districts referred to above.

In the southern districts of Quebec May was cool, with the exception of a few days from the 17th to the 20th and scattered days toward the end of the month when temperatures reached the seventies. Average temperatures for the month were one or two degrees below normal on the Gaspe Peninsula, and two to five degrees below normal in the remainder of southern Quebec. In the central section of the province, there were deficiencies of two degrees, but the northern part of Quebec experienced temperature excesses of one to three degrees.

Precipitation was very light in most of southern Quebec with deficiencies ranging to sixty per cent. In the Lake St. John area there were excesses ranging to fifty per cent while farther north most stations reported two or three times the normal fall.

May weather was changeable in the Province of Ontario with temperatures fluctuating above and below normal every two or three days. The 13th was the warmest day in northern Ontario with a number of stations setting new record maxima for the day. Of these the most noteworthy was 81 degrees Fahrenheit at Armstrong. In southern Ontario temperatures were warm from about the 14th to the 18th. This was the most prolonged warm spell of the month. Mean temperatures for the month were near normal in southwestern Ontario, two or three degrees below normal in the remainder of southern Ontario and two to four degrees below normal in the northern part of the province.

May precipitation was very light in southern Ontario, deficiencies ranging from forty to eighty per cent. It is worth noting that in southwestern Ontario the total precipitation since January 1, 1958 was the lowest on record. At Windsor the five-month total was only 24 per cent of normal and at Toronto 40 per cent, to quote two examples. Rainfall was slightly heavier in northern Ontario than in southern Ontario. In Temiskaming and Cochrane districts there were a few stations reporting small excesses, while the rest had deficiencies ranging to thirty per cent. In Rainy River and Kenora districts there were deficiencies from thirty to sixty per cent, while in the remaining northern Ontario districts there were deficiencies ranging to forty per cent.

The first four days of May were cool in all three Prairie Provinces, but from then on temperatures remained above normal throughout the month. On the 13th a warm outbreak caused record high temperatures for the date at a number of stations in Manitoba and Saskatchewan. Temperatures were warm again near the end of the month, although no records were set. Mean temperatures for the month were normal to four degrees above normal in Manitoba, four to seven degrees above normal in the grain areas of Saskatchewan and Alberta, and one to four degrees above normal in the northern halves of the two provinces.

Precipitation was light in the Prairie Provinces throughout May except for a few locally heavy thunderstorms. One of these on the 12th brought over an inch of rain to a number of stations in the St. Walburg area of Saskatchewan. For the month as a whole, there were precipitation deficiencies of fifty to one hundred per cent. Light rainfall in the grain areas, following as it did, light precipitation for the early part of the year resulted in drought conditions. Most Prairie stations have experienced only about fifty per cent of the normal precipitation from the beginning of the year. Winnipeg, for instance, had 50 per cent, Rivers 45 per cent, Regina 63 per cent, to quote a few examples. These percentages are not as low as those reported in southwestern Ontario, but as the normal precipitation is lower they represent less moisture. Light rainfall was accompanied by lower relative humidity than usual and stronger winds, and had the effect of drying out the soil, so that soil drifting was prevalent in a number of areas.

An area of high pressure covered the southern half of British Columbia during the first part of the month while the northern half was under the influence of a flow of moist air from the Pacific. During the last five days of the month cyclonic conditions prevailed over the southern section. As a result most of the precipitation fell in the first part of the month in the northern part of the province and on the last four days in the southern section. Total precipitation for the month as a whole was light throughout the province with two stations - Lytton in the southern part of the province and Germansen Landing in the north, reporting no precipitation at all. There were excesses of 20 per cent in the Nass River valley and scattered excesses on the southeast corner of Vancouver Island and in the southern interior valleys but generally there were deficiencies averaging about fifty per cent throughout the province.

Mean temperatures for May were above normal in all parts of British Columbia. The greatest excesses ranged to eight degrees and were found in the southern parts of the Okanagan and Kootenay valleys. There were excesses of four to six degrees in the remainder of the province except along the coast where they ranged from two to four degrees.

In the Yukon Territory all stations reported mean May temperatures normal or above. There were excesses of two degrees along the southern boundary, one degree at Whitehorse, while the temperature was normal at Dawson, Mayo and Snag. Dawson reported twice the normal May precipitation and Mayo a fifty per cent excess but all other Yukon stations reported deficiencies ranging to seventy per cent.

May temperatures averaged one or two degrees below normal in the southwestern half of Keewatin district and the adjacent corner of Mackenzie. Aside from this all stations in the mainland sections of the Northwest Territories had excesses of mean temperature ranging to three degrees. On the islands of the Arctic Archipelago there were deficiencies ranging to two degrees in the western part and excesses of one to three degrees in the central and eastern sections.

Precipitation was very irregularly distributed over the Northwest Territories in May, Wrigley, Yellowknife and Coral Harbour reporting over twice the normal fall. At the other extreme Sachs Harbour reported only a trace of precipitation and Arctic Bay experienced a 95 per cent deficiency. The average over the area was 10 per cent above normal for Mackenzie, 30 per cent above normal for Keewatin, and 15 per cent below normal for Franklin.

TEMPERATURE. PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the water equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of (A) following the station name indicates that the meteorological observations are taken at Airport offices and (R) indicates that the observations are taken at Radio Range Stations not at Airports.
